Project Goals from the Beginning

- Create a simplistic app that gives the

  user a randomized restaurant

- Build this application using React Native

  and Yelp's Fusion API

- Make UI as clean and minimalist as possible

End Product ✅

- Robust & elegant mobile app for iOS and Android

- Simplistic roulette style UI gives user a randomized restaurant

- Saves and lists restaurants that were favorited by the user

- Ability to call the business & get directions right from the app

Potential Future Improvements

- Save favorited restaurants in database instead of locally

- Add GPS map preview window for the random restaurant to show the user exactly where it's located on a map

- Add Google review score so the user can compare to Yelp's review score
